

CASE STUDY : 1

How to publish an android app on google play store

Introduction

- publishing an Android application on the google play store is the final and most important step of mobile APP development. It ensures the application become publicly accessible, trustworthy and ready for global.
- This case study explains the complete, Authentic and safe procedure of publishing an android application on the google play store, including the required credentials, store listing preparation, app bundle creation and release management.

Requirement for publishing

- Google play developer Account
 - Cost : \$25 one-time fee
 - Require a gmail Account
 - Add Developer details like :
name, Address, Email, number

• APP signing credentials

- Google requires every app to be digitally signed.

[i] keystore file (.jks)

- This is used to store your app's signing certificate.

[ii] keystore Alias

- Inside the keystore, you create a key (certificate)
- This key has an internal name known as Alias

[iii] keystore password

- password to unlock the keystore file.
- Without this password, the keystore becomes useless.

[iv] key (Alias) password

- Another password only for the key inside the keystore.
- sometime both passwords are the same, but they can be different.

• APP Assets

- APP NAME
- APP ICON
- Feature graphic
- screenshot
- Full Description
- category selection
- content Rating form
- privacy policy URL
- APK or AAB File

Publishing process

Step-1 create google play developer Account

- go to play.google.com/console.
- Login with email.
- pay the Registration fee.
- Accept developer distribution Agreement.
- Add personal details for verification.

Step-2 generate APP signing credential

- Command :

keytool -genkey -v -keystore

yourapp-release.jks -keyalg RSA -keysize

2048 -validity 10000 -alias your-app

- Key will set :

• jksfile • alias • passwords

Step-3 Prepare Android App bundle

- Playstore only Accept AAB not APK.

- In Android studio :

Build → Generate signed bundle/APK →
Android APP (.aab)

- provide :

key store path

key store password

Alias name

key password

step-4 create a new APP in play console

- open play console
- choose : App name , Default language , App type , Free or paid
- Accept declaration

step-5 setup store Listing

- APP Details : short and full description
- graphics : Icon, screenshot, feature graphic
- Categorization : category , tags
- contact details : Email , Phone , website

step-6 upload AAB file

- goto production → create new Release
- Choose google play signing
- upload APP bundle
- Add notes
- save

step-7 Review and submit

- once all section show green check press → submit for review.
- It takes 4-7 hours for update.
- 1-3 days for new app.

Challenges Faced during publishing

- APP rejected due to policy violation
- incorrect screenshots
- missing privacy policy
- wrong keystore lost
- APP crash on startup

Conclusion

- publishing an Android app requires proper credentials, app assets and policy compliance.
- It's more than uploading - developers must follow Google's privacy and security rules to safely publish and update the app.
